Virtual Cross Connect

Data Center Services | Virtual Cross Connect (VXC)

Wave's Virtual Cross Connect (VXC) service is a private Ethernet connection between designated data centers. Wave's VXC is a private, transparent, and cost effective method for data center to data center connectivity.

When you need:

- Private, dedicated high-bandwidth connectivity between data centers
- Secure, always-on connections
- Guaranteed up-time

Why choose Wave:

- Access to over 60+ data centers in Washington, Oregon, and California
- 1 Gbps and 10 Gbps speeds over our pure fiber network
- Published route maps for your diversity planning
- Carrier-grade, industry-leading Service Level Agreement (SLA)
- 24/7 security and monitoring from Wave's local Network Operations Center

Wave's VXC connections provide:

Reduced IT infrastructure and management costs
Get direct data center connectivity, multiple bandwidth options, and competitive price points with Wave.

Robust, affordable bandwidth- Wave's fiber network provides competitively priced, high-capacity connections for optimal and efficient communication.

Business continuity and disaster recovery
Our self-healing fiber ring protects your critical data and provides superior network availability and resiliency.

Rapid service turn-up
Adapt to expanding business needs with simple, flexible, rapid deployments to numerous data centers.

Secure transport
Safeguard your network and reduce risk with a secure, private Ethernet network.

24/7 Support with service guarantees
We stand behind our solutions with an end-to-end industry-leading Service Level Agreement (SLA) that extends across our backbone, metro core, and last-mile network for fiber-based services. You'll receive 24/7 Network Operation Center support and monitoring.
